

Genacol[®] Plus

AminoLock[®] Collagen +
Glucosamine Hydrochloride

***Helps to maintain
joint health***

genacol.sg

Genacol® *Plus* is a natural health product of superior quality that helps maintain joint health. The winning combination of **AminoLock® Collagen** and **Glucosamine** provides maximum efficacy.

Constituents of Genacol® *Plus*

> **400 mg of AminoLock® Collagen per capsule**

Genacol®'s exclusive **AminoLock® Collagen** is a natural health product scientifically proven by three clinical studies to reduce joint pain.

AminoLock® Collagen is unique and manufactured using **Genacol®**'s proprietary manufacturing process: **AminoLock® Sequence Technology**.

Through this improved enzymatic hydrolysis, we made it possible to obtain an **exclusive collagen at less than 1 kilodalton (kDa), the lowest molecular weight in the world!**

Unlike other hydrolyzed collagen supplement that the body struggles to absorb, **AminoLock® Collagen peptides are 3X SMALLER, for superior bioavailability and better results!**

> **500 mg of Glucosamine Hydrochloride per capsule**

Glucosamine is renowned to have beneficial effects on joint health. This kind of glucosamine, the hydrochloride, was chosen because of the purity of its composition, since it has 98% of glucosamine, allowing an optimal absorption. (Derived from crab and shrimp exoskeleton)

What is Glucosamine?

Glucosamine is a biochemical product naturally present in our body, specially in bone cartilage.

This substance allows to slow down the degradation of the cartilage and increases the lubricating effect of the synovial fluid, which is the joint

liquid that is secreted by the organism that protects the cartilage from mechanical stress.

As we age, glucosamine levels fall. Studies demonstrated that **Glucosamine** dietary supplements can help maintain joint health.

What is Collagen?

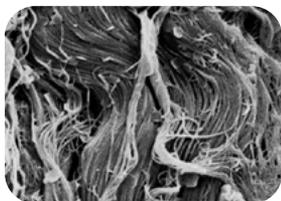

Collagen is an important structural protein that makes up one third of the protein in the human body.

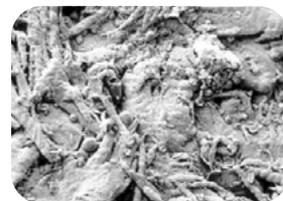

Collagen is found everywhere: joints, ligaments, connective tissue, skin ... In fact, it acts like the “glue” that holds our bodies together!

> **Did you know that 67% to 99% of the joint structure is composed of collagen?**

As natural collagen production **begins to decline in our 30s by 1% every year and even more once we are in our 50s**, it affects ligaments, tendons and cartilage.

Normal collagen fibres

Arthritic collagen fibres

Collagen decrease may create, in joint structure, risks of developing unpleasant degenerative disorders such as :

- **Joint discomfort and stiffness**
- **Cartilage deterioration**
- **Joint tissue degeneration**
- **Ligament and tendon weakness or injuries**

It has been recognized that **Genacol®'s exclusive AminoLock® Collagen** supplies amino acids that contribute to the maintenance of collagen in the body.

Its unique chains of amino acids will help by acting as building blocks to regenerate every type of collagen in the body.

What Genacol® *Plus* can do for your joints?

Genacol® *Plus* combines **AminoLock® Collagen** and **Glucosamine**, two renowned essential ingredients in maintaining joint health.

Genacol® *Plus* improves the quality of synovial fluid that lubricates joints while helping maintain healthy cartilage.

Try it today and feel the Genacol® difference!

Genacol® *Plus* dosage:

Adults: Take 3 to 4 capsules daily: 2 capsules in the morning 30 minutes before breakfast and 1 or 2 capsules at bedtime.
