Nature's Immune Defender for the Entire Family*

Propolis is a material used by bees to act as the hive's immune system, and has been used by humans for thousands of years to promote overall wellness and immune defense. It has been extensively researched for a wide range of health benefits, including some of the most important for children and adults alike.

Now you can discover the immune-supporting benefits for your family with Propolis Extract from Terry Naturally®.* It delivers EP300™ Propolis, which has a unique profile of compounds that show astonishing immune-supporting power.*

Plus, Propolis Extract is produced with a commitment to bee friendly practices and healthy hives, and uses a patented method to filter out inactive resins and beeswax, yielding a powerful and concentrated propolis extract.

Propolis Extract contains a wealth of special compounds that support you and the ones you love. We're certain it will become your go-to supplement for your entire family.*

Frequently Asked Questions for Propolis Extract:

Q. What is the difference between royal jelly, beeswax, and propolis?

A. **Propolis** is made from the resins gathered from trees and other plants and then modified by the bees' own enzymes as they process the material, mix it with beeswax, and make it into a protective antibacterial glue and sealant. Bees use propolis to protect the hive. It contains many compounds that can support immune health.*

Royal jelly is a nutrient-rich food made by honey bees to feed both larvae and queens. For larvae, it is only fed for a short time, while queens rely on this food for their entire lives. Royal jelly is considered to have health properties of its own for humans, because of its amino acid, vitamin, enzyme, and trace mineral content, but it is not the same thing as propolis.

Beeswax is often confused with propolis, but they are not the same. Beeswax is used to construct the cell walls of the hive, while propolis is used to seal the hive (it is sometimes called "bee glue") and protects the hive from bacteria and other invaders. Because propolis is used, in part, to cement the hive together, it can be found combined with beeswax, but that material is filtered out from our propolis.

Q. Should I take this product if I'm allergic to honey or pollen?

A. We cannot predict individual allergic responses. While we are not aware of cross allergies for honey, and the product filtered to remove beeswax, it is always best to check with your allergy specialist.

What to pair with Propolis Extract:

- **ViraPro™** – Delivers the power of Sambucus – elderberry extract – plus key vitamins and minerals well known for their effectiveness to support a healthy immune system.*
- **ViraPro™ Kids** – Features the power of clinically studied Sambucus combined with immune-supporting vitamins and minerals at levels perfectly formulated for kids – all in a great-tasting chewable tablet.*
