

Genacol[®] *Plus*

AminoLock[®] Collagen +
Glucosamine Hydrochloride

*Helps to
maintain joint health*

Genacol[®] Plus is a natural health product of superior quality that helps maintain joint health. The winning combination of **AminoLock[®] Collagen** and **Glucosamine** provides maximum efficacy.

Constituents of Genacol[®] Plus

> 400 mg of AminoLock[®] Collagen per capsule

Genacol's exclusive AminoLock[®] Collagen provides concrete benefits for preventing osteoarthritis-related joint pain and supporting joint health.

Its clinically proven effectiveness sets our products apart from other collagen supplements currently available on the market.

Thanks to our patented technology, we can fractionate collagen extracted from bovine sources to obtain the lowest possible molecular weight, with less than 1 kilodalton (kDa).

> 500 mg of Glucosamine Hydrochloride per capsule

Glucosamine is also important for joint health. It promotes the proper functioning of joints by increasing the lubricating action of synovial fluid.

Glucosamine hydrochloride contained in Genacol[®] Plus was chosen for the purity of its composition, since it has 98% of glucosamine, allowing optimal absorption.

Glucosamine Hydrochloride is extracted from crab and shrimp exoskeletons.

What is Glucosamine?

Glucosamine is a biochemical product naturally present in our body, especially in bone cartilage.

This substance allows to slow down the degradation of the cartilage and increases the lubricating effect of the synovial fluid, which is the

joint liquid that is secreted by the organism that protects the cartilage from mechanical stress.

As we age, glucosamine levels fall. Studies demonstrated that Glucosamine dietary supplements could help maintain joint health.

What is Collagen?

Collagen is an important structural protein that makes up one-third of the protein in the human body.

Collagen is found everywhere: joints, ligaments, connective tissue, skin ... In fact, it acts like the “glue” that holds our bodies together!

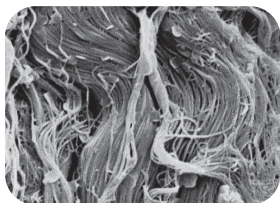

> **Did you know that 67% to 80% of the joint structure is composed of collagen?**

The amino acids necessary for the production of collagen are naturally created by our body. However, the body's ability to create new proteins like collagen decreases with age. **From the age of thirty, its production decreases by 1% per year, and this accelerates in our fifties.**

This collagen decrease explains the appearance of symptoms associated with aging and risks of developing unpleasant degenerative disorders such as :

- **Joint discomfort and stiffness**
- **Cartilage deterioration**
- **Joint tissue degeneration**
- **Ligament and tendon weakness or injuries**

It has been recognized that Genacol®'s exclusive AminoLock® Collagen helps to counteract the slowing down of collagen production. Therefore, it maintains the health and function of tissues within the joints and reduces joint pain related to osteoarthritis.

Normal collagen fibres

Arthritic collagen fibres

What Genacol® Plus can do for your joints?

Genacol® Plus combines AminoLock® Collagen and Glucosamine, two renowned essential ingredients in maintaining joint health.

Genacol® Plus improves the quality of synovial fluid that lubricates joints while helping maintain healthy cartilage.

Try it today and feel the Genacol® difference!

Genacol® Plus dosage:

Adults: As a dietary supplement, take 3 capsules once daily or as directed by your health care practitioner.

Recommendations: Use at least 4 weeks to see the beneficial effects.

Warnings and precautions:

Contraindications :

Consult a health care practitioner if you are pregnant or breastfeeding.
